

Feed Back of the Last APK:

Citizen Part:

Navigation:

- 1- Navigation doesn't ask for submitting our location, and it doesn't start till we click on start, [this should be fixed](#).
- 2- Navigation Part is not shown like that we create the functionality , when user select place route draw and then start button shown , if you run the code of Sim previously sent you will get it , on start button then navigation start.
- 3- To get in inside one of the functionalities it always write" loading" and to get out. [This should be fixed](#)
- 4- **Also you haven't made the test with cars as have asked by mister Massy.**

Other:

- 5- When we first register for the date of birth you used a calendar and we can't write the year. [This should be changed](#)
- 6- When we make a report, the button to go back of the phone doesn't function .[Change it](#)
- 7- For Handrail process we are not showing call screen (we already done this last week but you remove it)
- 8- Same Case for User create incident through City not showing call screen (we already done this last week but you remove it)

Operator part:

- a) For operator navigation same issue as citizen part
- b) The bar shows 0/0, you should Show 0/4, and it doesn't show the percentage at 100%, [change it](#)
- c) The whole structure changed by Simranjit, is not showed in. [change it](#)
- d) For handrail we are not showing screen of call, after finish we go to main screen (we implement this , you remove it), [change it](#).
- e) Same case in City selection, you also removed it. [Implement it](#)
- f)) Design of Home page is not shown like Sim created, [Implement it and ask for Sim to explain it](#)
- g) 2) when click on assigned intervention , its showing pop but it doesn't go to that screen , if no data is found , on that screen its showing this dialog box and say" No Assigned Intervention Found " so We can't have access to the "assigning an intervention", [this should be fixed](#)

Comment by Simranjit

video recording that you code create in not working in samsung galaxy j7

apk size is too heavy , user shrink resource or proguard

Also for navigation is not working that ways that I said ,
I explain if user select the place then route is draw on the map then shown start button,
when start button the navigation start , we only implement navigation functionality
all functionality previously build is ok like google map
therefore I said use different fragment class ,

when click on the start button call different fragment
navigation icon is not same as I provided ,also zoom the map and focus on the first location

For Position of incident , provide grade 2 user to test the screen of position of incident

I sent code to massy sir , you get some code in gradle in comment that code is used to decrease apk file

For navigation test in car mode

For home screen of the operator is not same as I create,
you find in update screen on github

The latest code with comment:

<https://we.tl/t-DUPh1wVgVf>

Important: I need APK to be reviewed and be ready for Monday by the end of the day.

The APK size is too heavy, it should be reduced as much as possible.
